DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 3 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification does not disclose the elastic material to be resin.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kojuma (USP 5,704,598).

Re: claims 1 and 2, Kojuma shows a liquid sealed mount device in figures 6B and 7, as in the present invention, comprising: a first mounting member 212, 214; a second mounting member made of resin 216B; an elastic material 218 wherein the

elastic material is rubber, bridging the gap between the first mounting member and the second mounting member; a diaphragm 230 for forming a liquid chamber sealing the liquid together with the elastic material; a partition wall 234 for partitioning the liquid chamber into two chambers, as shown; and an orifice 236 provided in the partition wall for communicating the two liquid chambers; wherein the elastic material is vulcanized and bonded integrally with the first mounting member and a metallic barrel member 220 for caulking and fixing the diaphragm; and the second mounting member is formed by injection molding a resin material on the outer circumference of the elastic material, in which a seal is provided between the metallic barrel member and the diaphragm by caulking the peripheral edge part of the diaphragm with the metallic barrel member, as shown in figure 7 wherein metallic barrel member 220 is being bent inward around the peripheral edge part of the diaphragm 230.
